25889	7590	03/16/2006	EXAMINER	
WILLIAM COLLARD COLLARD & ROE, P.C. 1077 NORTHERN BOULEVARD ROSLYN, NY 11576			AFZALI, SARANG	
			ART UNIT	PAPER NUMBER
			3729	

DATE MAILED: 03/16/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 10/734,806	<b>Applicant(s)</b> BING ET AL.	
	<b>Examiner</b> Sarang Afzali	<b>Art Unit</b> 3729	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on Application filed 12/12/2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-5 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. The reference "PCT/DE02/02768" cited under The Prior Art, page 2, line 14 of the specification is neither listed in the IDS nor any copy is provided with this application.

### ***Specification***

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

***Claim Rejections - 35 USC § 112***

3. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 1-2, the phrase "A method for the production of a forged piston for an internal combustion engine" and further on lines 9-10, the phrase "to produce a piston blank by forging" are reciting the forging process in a general term, however the claim language is very confusing and unclear as if and what the forging process does and how the "causing the combustion depression to be formed in the oxidation-resistant steel" on lines 18-19 is being done.

Claim 1, lines 6, 7, and 11, claim 2, line 3, claim 3, lines 2 and 4, the phrase "unmachined part" is confusing and not clear as if the first cylindrical and second cylindrical parts have ever been machined prior to being assembled. Note that the blank cylindrical parts must have been somehow machined (turning, rolling, shaping, etc.) to the right size and shape prior to being assembled together. Applicant may need to clarify as what exactly "unmachined" means and may have to specify that the joining surfaces of the two cylindrical parts are in a "rough" form prior to being joined together or something to this effect instead of using a general phrase such as "unmachined".

Claim 3, line 2, the phrase "before forging, the unmachined parts, . . ." is also confusing as which forging is being referred to.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 1, as best understood, is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant Admitted Prior Art (as set forth on page 3 of the specification, PCT WO 02/06658) in view of Nakano et al. (U.S. 4,517,930).

As applied to claim 1, WO 02/06658 discloses a method for the production of a forged piston for an internal combustion engine, the piston having a combustion depression provided on the piston head, comprising the steps of: forming the piston from a first cylindrical unmachined part (14, Fig. 3) having at least one flat face made of oxidation-resistant steel (stainless steel) and a second cylindrical unmachined part (16, Fig. 3) having at least one flat face made of hot-forgeable steel (steel SE 4140), with the same diameters, to produce a piston blank by forging (10, Fig. 2), said step of forming comprising: bringing together the unmachined parts at their faces and aligning them with respect to their diameters, so that the faces form a minimal projection and parting; connecting the two parts (12, Fig. 3); causing the combustion depression to be formed in the oxidation-resistant steel, and finishing the piston blank via machining to produce a piston ready for installation the internal combustion engine (Fig. 2).

WO 02/06658 teaches the invention cited with the exception of using a seam weld as the connecting means. However, Nakano et al. teach a method for constructing a piston for internal combustion engine (particularly diesel engines, col. 1, lines 3-4) wherein the piston head (crown 1, Fig. 2) is made of parts (1a) and (1b) from different materials and welded together at the seam by preferably electron beam welding or by arc welding (Fig. 2, col. 2, lines 1-12).

It would have been obvious to one of ordinary skill in the art at the time of invention to have provided WO 02/06658 with a suitable welding technique as taught by Nakano et al. to provide a piston with an upper part acting as a heat insulator thus allowing only a small amount of heat of combustion to transmit to the ring carrier through the upper part of the crown (col. 2, lines 27-30).

6. Claims 2-5, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over PCT WO 02/06658 in view of Nakano et al. and further in view of Rudd (U.S. 3,872,275).

As applied to claims 2 and 3, PCT WO 02/06658/Nakano et al. teaches the claimed invention with the exception of not explicitly teaching the step wherein the welding is done in a room temperature or in a heated state and the temperature range of 1100°C to 1300°C in the heated state.

However, Rudd teaches a method of forge welding with a continuous weld seam of two dissimilar metal parts in a heated state (wherein a temperature of at least 2000°F equivalent to 1093°C is reached) to forge weld the surfaces of the materials welded to

Art Unit: 3729

each other (col. 2, lines 45-54). It would have been obvious to one of ordinary skill in the art at the time of invention to have provided WO 02/06658/ Nakano et al. with a suitable welding technique and temperature as taught by Rudd to provide an effective means of to cause the surfaces to be forged welded together (col. 2, lines 49-50).

As applied to claim 4, PCT WO 02/06658/Nakano et al. teaches the claimed invention with the exception of not explicitly teaching the step wherein the heating takes place inductively.

However, Rudd teaches the heating takes place inductively by suitably configuring the induction coil and adjusting its position with respect to the desired weld line and by properly controlling the heating time to provide a continuous forge weld between the two metal parts without undesirable heating (col. 2, lines 19-26). It would have been obvious to one of ordinary skill in the art at the time of invention to have provided WO 02/06658/ Nakano et al. with induction heating step as taught by Rudd to obtain an effective rapid continuous weld seam and without causing undesirable heating hence preventing damage or harmful distortion of portions of the parts outside of the weld area (col. 2, lines 22-26).

As applied to claim 5, Nakano et al. teach that electron beam welding or arc welding is preferably used to weld the two parts (1a and 1b) together (co. 2, lines 6-8).

### ***Conclusion***

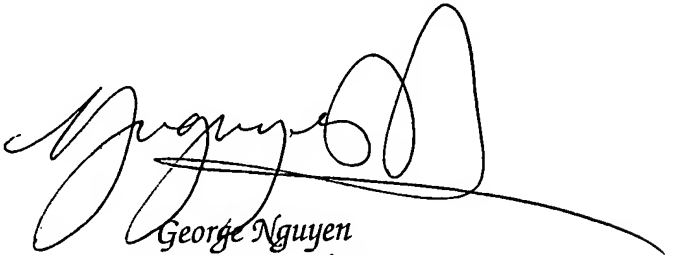

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sarang Afzali whose telephone number is 571-272-8412. The examiner can normally be reached on 7:00-3:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
